

Swagelok® Construction Services

Build it With Confidence. Build it With Swagelok.

Coordination is Critical to Success.

You need suppliers and collaborators with the global reach, breadth of capabilities, and application expertise to keep up.

Managing any large-scale facility construction project can be difficult, and when stakeholders are in multiple locations, projects can become even more complex. No matter how layered your project may be, Swagelok can help.

Only Swagelok offers a comprehensive package of premium fluid system products and services, project management support, and global resources to holistically support construction projects involving industrial fluid systems.

We help you overcome challenges related to:

- Delivering projects on time
- Regulation and conformance
- Complexity
- Managing costs
- Lack of resources
- Operational efficiency

Swagelok stands behind you with the highest levels of quality, reliability, and performance, backed by 75+ years in the industry, meeting key standards, including ASME Section III.

Our capabilities supporting facility construction:

Efficient Project Management

We work with you at every point in the process, from feasibility and FEED through detailed design, construction, and commissioning funneled through a single point of contact for simplicity and efficiency.

Application and Materials Expertise

We understand the needs of challenging applications and what materials choices and design considerations are necessary to ensure you receive the performance you require.

Engineering Support

From locally based field engineers to corporate product design specialists, we connect you with experts who provide tailored support for component selection, system design, assembly fabrication, and troubleshooting.

Standardized, Practical Training

Our installation training programs equip personnel with the knowledge needed to ensure safety and performance of your new facilities' fluid systems. We support increased acumen around fluid system design, orbital welding, tube bending and more.

Inventory Management and On-Site Warehousing

Swagelok provides customized on-site inventory management services as well as just-in-time delivery to ensure optimum stock levels are maintained. We also provide support during outages with consignment-based inventories for immediate on-site availability of pre-selected critical components.

Fluid System Evaluation and Advisory

Our experienced experts will visit your facility to evaluate your systems for efficiency and installation best practices. We then deliver a detailed report outlining recommended enhancements tailored to your specific fluid system applications and goals for reducing emissions and lowering operational expenses.

Design and Build

Ensure optimal performance while maintaining production costs of new fluid system assemblies by allowing our application engineers and technicians design and build a fluid system for you.

Discover the Swagelok Advantage:

Work with Swagelok for your next facility construction project to maximize the consistency and performance of installed fluid systems while minimizing costs and delays along the way.
