

How does the Swagelok® Custom Solutions process work?

Whatever the idea, we can help. Let our experts assist with your customized fluid system needs because we know you have more to do and less time to do it. Swagelok is ready to facilitate, be a technical resource, and supply assemblies and fabrications.

We will work with you to enhance and optimize your design ideas. Swagelok offers flexibility by:

- Converting from an existing P&ID
- Building from an original drawing

We'll put the CAD drawing together, allowing you a chance to visualize the assembly layout or present it to your own internal customers, and to keep for future reference when needed.

Once the drawing is approved, the quote is finalized, and a PO received, our Swagelok certified technicians will build it. Once built, we test it to make sure it is leak free and ready to install before it arrives at your facility.

As always, Swagelok products and services, including assemblies, are backed by our limited lifetime warranty. *Exceptions apply to third-party parts.
