

## HOSE ESSENTIALS TRAINING

Extend your production cycle, ensure safety and lower total cost of ownership by understanding the fundamentals of fluid system hose. Students learn to define common terms pertaining to hoses, describe how to evaluate hose fit for purpose, discuss hose selection variables, list common practices when conducting hose inspections, and discuss best practices for preventative maintenance of hoses.

### HOSE ESSENTIALS TRAINING IS IDEAL FOR:

- INSTALLERS
- MAINTENANCE ENGINEERS
- MAINTENANCE MANAGERS
- SUPERVISORS
- SAFETY ENGINEERS

## TRAINING OBJECTIVES

- Participants (all levels, including managers) can review and understand metrics
- The course objectives are clear and followed
- Course discussions are productive
- Participants understand individual and team challenges
- Participants are involved and given the opportunity to contribute
- Issues and potential roadblocks are clearly identified and thoroughly discussed

Upon completion of this training participants should be able to:

- Define common hose terms and terminology
- Describe how to evaluate hose fit for purpose
- Discuss hose selection variables
- Describe guidelines for hose installation
- List common issues found in hose applications
