

Swagelok® Steam Lance

Safely Heat and Clean Process Equipment

Get More From Your Fluid Systems

Don't let cold weather conditions upset operations in your facility. The steam lance will help keep your process media moving when ice blocks, viscous fluids disrupt flow or solidify in a pipe. Prevent work stoppages by quickly deicing mission critical equipment, containment vessels, process or instrument lines. This versatile steam lance can even clear sidewalks and overhead ice.

With your 1-part number order you will receive a fully-tested, ready-to-use solution. Have peace of mind knowing that no field assembly or on-the-fly solution needs to be created that might not meet your required safety standards.

Consider how you'd like to best use this tool in the field. Your solution may include hoses, carts, hose reels, different valves or materials which can allow you to extend its reach or protect components.

Your facility places safety and operational efficiency as high priorities. These custom solutions can help you reach your goals and get the job done well.

Benefits

- ✓ 1-part number for easy ordering
- ✓ Quick delivery — comes to your dock ready for use
- ✓ Safety: this product is 100% tested

Safe Product Selection

When selecting a product, the total system design must be considered to ensure safe, trouble-free performance. Function, material compatibility, adequate ratings, proper installation, operation, and maintenance are the responsibilities of the system designer and user.

Applications

- ✓ Clean containment vessels
- ✓ Instant heating and cleaning of process equipment
