

Mechanical Seal Support Systems

For Compressor and Pump Seal Applications

Your pumps can't fail!

Stop risking uptime. Don't rely on aging rotating equipment systems prone to leaking, and likely to cause environmental compliance and maintenance headaches.

Our comprehensive assembly process allows you the flexibility to customise any of your applications, including those that incorporate API 682 plans. This lets you focus your resources on what you do best, and helps you mitigate risk and improve efficiencies.

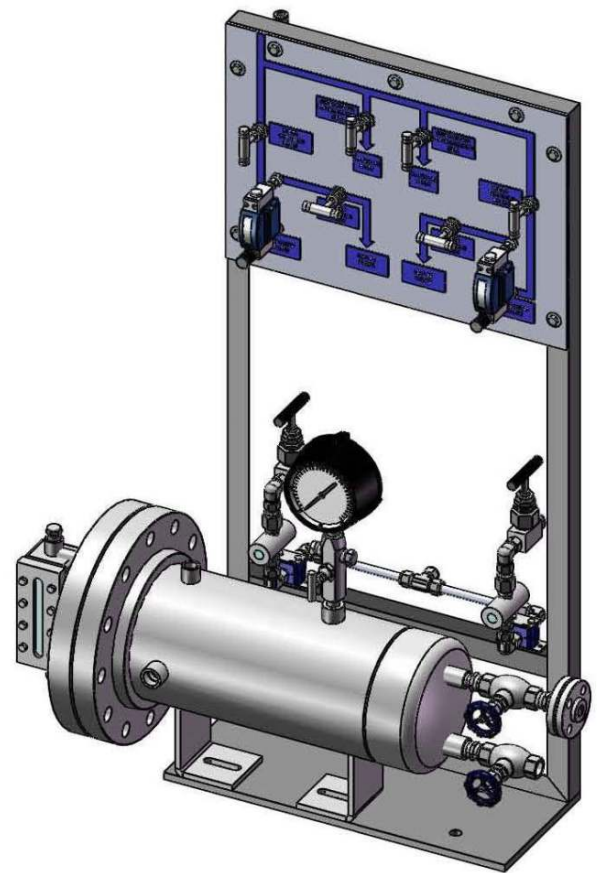

Online reliability

Improve critical equipment seal reliability

- Swagelok certified installers provide the highest degree of workmanship and construction, and Swagelok's Quality System (SQS) guidelines ensure reliability
- We specialize in the assembly of fluid system components that are 100% tested, perform longer, and have [Swagelok's limited lifetime warranty](#)

Peace of Mind

- Fewer threaded connections minimise labor intensive leak points
- Single point solution sourcing — we customise to your specifications
- Enhanced ability to standardize operations and maintenance — improves efficiencies & safety
- Reliability, longevity, and ease of maintenance for lowest total cost of ownership

Contact your local Swagelok sales and service rep today to find out more about how these systems reduce your risks and improve your online reliability.
