

Your Local **Swagelok** Resource for Optimum Marcellus and Utica Productivity and Profitability**MAXIMIZING**
Worker and Site Safety**MINIMIZING**
Fugitive Emissions**MASTERING**
Application Challenges

BIG Advantage:

Swagelok **Small-Bore***
Tubing Systems...

- Inherently Safer
- Cost-Effective
- Time-Efficient
- Leak-Tight
- Ultra-Reliable

...versus typical threaded or welded Pipe Systems

(*tubing systems two inches or less in diameter)

Our **tube fittings/bent tubing** solution, simple to install, maintain, and route around obstacles, delivers unparalleled performance by employing far fewer components – thus minimizing the potential for leaky, often dangerous, connections – throughout your fluid system. You'll also experience far less turbulence, pressure drop, and system strain compared to heavy pipe and pipe elbows. Plus, though substantially lighter, our tubing provides superior pressure containment and an exceptional strength-to-weight ratio when pitted against pipe.

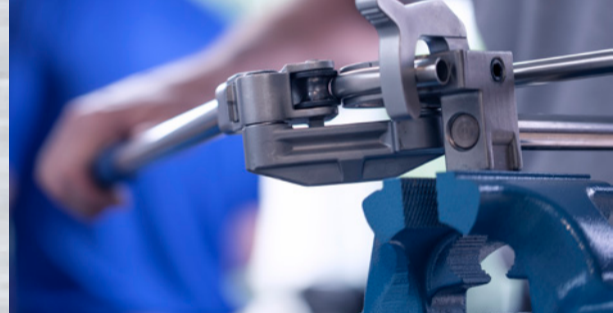

Then, there are cost considerations:

qualified welders, welding permits/equipment, weld boxes, fireboxes, air tests, tacking, purging, quenching, passivation, inspections, oils, tape, gases, sealants, assembly, disassembly, and so much more needed for a typical welded/threaded alternative....OR a **Swagelok Small-Bore tubing system** that, when assembled properly (and we can teach you precisely how to do so – your facility or at our Training Center), makes up **50%** faster, changes out in **75%** less time, and slashes your overall installation costs by at least **40%**.

Field-Ready, Field-Proven:

We now offer on-site expert technical support! Greatly reduce project scrap by bringing in our Swagelok-certified master tube benders who will not only perform any of the challenging bending you require – but will simultaneously train your technicians, in an actual application, how to operate a benchtop bender... so they can make those same bends on future jobs!
