

Some **Q & A**for a Healthier **ROI*****If you're asking yourself:******How do I replace the knowledge of my retiring workers?******How do I better balance my resources to meet the ever-increasing demands on my business?******How do I improve the accuracy and efficiency of my fluid systems?******How do I keep my workers and facilities safe?***

Swagelok Pittsburgh | Tri-State Area has a vast array of trusted, proven, and cost-effective solutions – supplementing the premier, leak-tight componentry we supply you – to help relieve your most challenging system and operational pressures:

Before the Pandemic, statistics showed that **up to 50%** of your skilled workers could retire over the next 10 years. Now, many have chosen to depart earlier than expected, leaving you with an immediate loss of critical know-how.

We offer unparalleled **Technical and Safety Training** – Tube Fitting Installation and Inspection, Tube Bending, Advanced Tube Bending, Valve Essentials, Hose Essentials, Sampling System Maintenance, Orbital Welding, and more – that will teach your technicians, new hires and veterans, how to do things safely and correctly...easing your overall worries, downtime, and expenses.

In addition, we can conduct extensive **audits of your fluid systems** to check for leaks, improper installations, and other inefficiencies that are negatively impacting your Bottom Line and, potentially, putting your workers at risk. We can also do the same for your **industrial hose usage**: evaluating your current selection, sizing, and storage practices to help boost system performance.

**We can lend a hand if your production is on the increase, but time and money are tight.**

**Our Custom Design and Build Fabrication** technicians are fully certified by Swagelok Company, thus all their work is covered by the Swagelok Limited Lifetime Warranty. From complex instrumentation panels to simple assemblies, our service will help you substantially slash waste, scrap, and rework costs – while enabling your staff to concentrate on more pressing tasks.

**Don't let inaccuracies in your fluid systems affect the quality of your end product.**

Our aforementioned **Energy-Loss and Hose Surveys** could be the first crucial step to a more productive and profitable output.

**Fact: Over 40%** of industrial safety accidents are solely due to preventable errors

Apply our **Safety Training and Advisory** capabilities to help ensure that your workers, equipment, and facilities perform optimally – and safely.
