

## FACT #1

IF YOUR  
SEALS FAIL,  
SO WILL YOUR  
ROTATING  
EQUIPMENT.

## FACT #2

SWAGELOK®  
SEAL SUPPORT SYSTEMS:

ULTRA-SAFE, EASILY CONFIGURABLE, LOCALLY  
BUILT, AND UNFAILINGLY RELIABLE.

They're simply better by design – to help you avoid unscheduled critical pump shutdowns, saving you time, money, and worry... no matter how challenging your application.

Available as API 682 Seal Plan Kits (a collection Swagelok components such as an Integral Orifice Flange Adapter/Thermowell Tee/Extended Male Connector/Orifice Union combination to connect the seal support plan to your pump) OR Assemblies (Panels, Seal Pots, Skid System), **our solutions:**

- Provide lubrication to seal faces
- Control pressure and temperature in the seal and seal chamber
- Flush the seal of contamination and/or residue build-up
- Prevent system process fluid from leaking to atmosphere

## RECENT TESTIMONIES

from just a few of our customers:

“Our refinery is now benefitting from improved seal flushes to the seals and can easily see if there's an issue. Shaft seal leaks no longer dictate our maintenance intervals.”

“Swagelok was instrumental in providing critical support during an unplanned outage, helping us achieve a seamless, on-time startup of a key unit. Swagelok worked diligently to design standards, improve leadtimes, and deliver panels by our very aggressive due date.”

“Our new Swagelok lube systems are compact, operator-friendly, and equipped with modern filtration and coolers that are readily available. Plus, they're neat, clean, and leak-free.”

**Swagelok Seal Support Systems can significantly improve your site/project safety, productivity, efficiency, and profitability.**
