

Delivering premium-quality fluid system products, fully engineered assemblies, and comprehensive application expertise to optimize safety, productivity, efficiency, and profitability in even the most challenging **Chemical and Refining** operations.

Designed for SAFETY. FIRST.

Protect your people and plant by incorporating **Swagelok Pressure Relief Valves** in your fluid-system design – no matter how vast or complex.

Avoid blowouts, equipment damage, excessive operating costs, or, worse yet, complete system failure by eliminating overpressurization due to procedural error, component wear, contamination, or an unexpected loss of site power.

HOW?

Install Swagelok Relief Valves within these critical applications:

- **High-Pressure Systems.** In tandem with Swagelok premium-quality, small-bore tube fittings, our relief valves deliver an exceptional supplemental safety measure.
- **Toxic Fluids.** Simply set our relief valves to capture vented pressure and media versus releasing such into the atmosphere.
- **Sensitive Analytical Equipment.** By pairing a Swagelok regulator with a properly rated and set Swagelok relief valve, you can assure sufficiently reduced pressures from your main process to expensive online analyzers, for example.

There are, of course, multiple additional means to significantly upgrade the safety of your operators and valuable assets: never intermix tube fitting hardware from different manufacturers, drastically minimize unnecessary connections and intricacies throughout your system, and account for challenging functional factors such as vibration.

For more information on Swagelok Relief and other Valves, contact:
