

One Day of Basic Training. Endless career-advancement opportunities.

In less than eight hours, at your facility or ours, Swagelok's renowned **Tube Fitting Installation & Tube Bending Safety Essentials** course will give you all the hands-on, personal instruction you need to expertly make up a reliable, leak-tight fluid system – greatly reducing downtime, scrap, and chance for injury or equipment damage at your project or operations site.

Our Strategic Services Trainer, **Mike Gagel**, spent 20 years at the Swagelok factory – authoring much of the Training content and developing processes used globally today by some 200 Swagelok Sales and Service Centers. He can customize your class agenda to best address your application challenges, past and present.

In addition, Mike will show you two distinctly different proven methods to bend tubing of various materials and diameters, including 1" and higher sizes that require use of a benchtop bender.

We even supply ALL event materials: hand benders, tubing, fittings, tube cutters, consumables. All you have to do is to show up at the chosen training location and time!

But don't just take our word for the value of our sessions. Here are just a few comments from recent participants:

"This is an absolutely must-learn system. I now have complete confidence that the tubing I run from point A to point B will not only look good, but will generate little, if any, waste as well."

"Gave me the skills to perform simple to some very complex bends."

"I cannot begin to tell you how much this class will help me to build leak-proof instrumentation panels and field routes of tubing."

"I saw my blueprints comes to life. The instructor was patient, thorough, and extremely knowledgeable."

"Taught me to first visualize the tubing runs before starting the actual work. Can only imagine how much we'll save in scrap and rework here forward."

"Enjoyed the entire class – but especially liked how I could learn at my own pace and apply that learning to my own applications."

"The teacher wanted to hear from us....about our leakage issues and overall system challenges. He was genuinely interested in our problems and encouraged us to ask questions and to express ideas."

AND DON'T FORGET:

We also offer these course titles – feel free to combine the half-day classes into a one-day learning experience:

- Valve Safety and Selection Essentials (4 hours)
- Hose Safety, Selection, Routing, and Sizing Essentials (4 hours)
- Advanced Tube Bending (3.5 days)

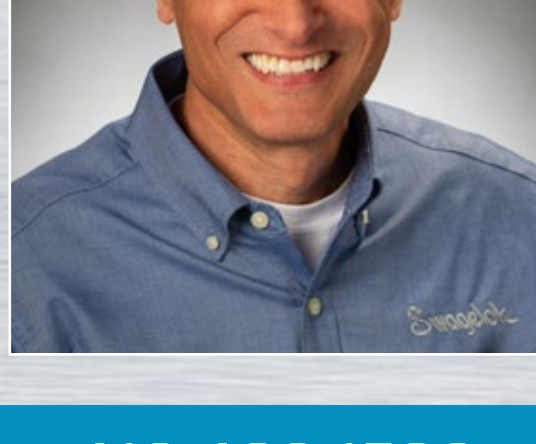

You will not make a better investment in the safety, productivity, and efficiency of your Engineers, Maintenance Technicians, and other pertinent fluid-handling personnel – that's our complete money-back promise!

How about YOU?
