

Maximum Extensions

Trust Swagelok for proven and unparalleled technical expertise to ensure that your fluid systems stay safe, deliver superb performance, and run profitably – *well beyond* your loftiest expectations.

You have real issues:

installation errors, material incompatibility, system design flaws, on-the-job mistakes, and possibly more.

Over time, any of these will likely lead to worker injuries, site/equipment damages, or even inferior end products.

We have real onsite solutions:

SAFETY AND PRODUCTIVITY TRAINING

Our renowned all-day *Tube Fitting Installation & Tube Bending Essentials* course will give your maintenance technicians the critical skills to properly construct a fluid system – from pulling up tube fittings to bending tubing of various materials and sizes. We provide all class necessities, including consumables, tube benders, and never-fail formulas. Students simply need to show up at your designated time and place!

We also offer courses in:

- Valve Selection & Safety
- Hose Selection, Safety, and Sizing
- Advanced Bending
- Materials Science
- Orbital Welding
- Process Analyzer Sampling System Optimization

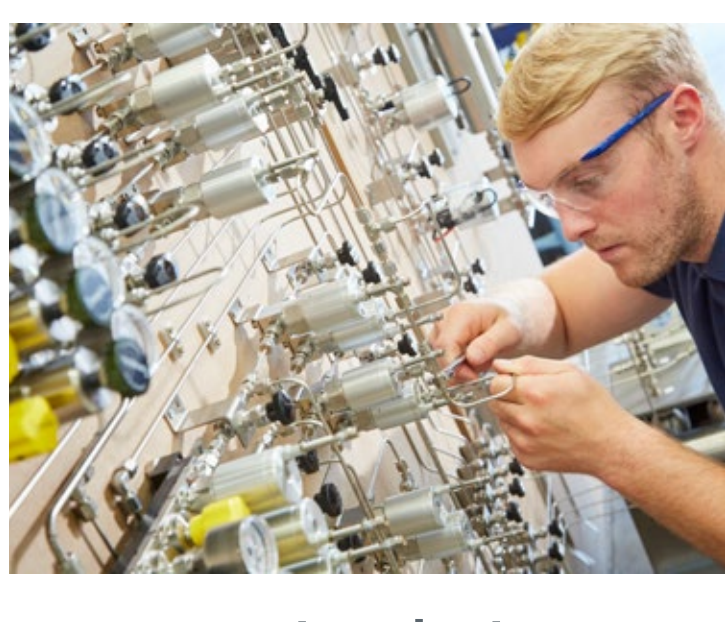

SYSTEM EVALUATIONS AND ADVISORIES

Our highly trained and fully certified troubleshooters will walk the floor with you to better understand why you're not getting the overall fluid-system performance to get more done – faster and efficiently. We'll examine your line connections to identify and give prioritized recommendations for excessive leakage. In addition, we can determine if your current hose choices and routing practices are ideal for your processes. We can even provide long-term monitoring services as your systems age and wear.

CUSTOM DESIGN AND BUILD FABRICATION SERVICES

We can save you time, money, and worry when your production schedules are tight or other operational inefficiencies are hampering site productivity. Our Field Engineer will work first with you to take your initial idea to a design phase, incorporating your exact project specifications and requirements. Then, our technicians will masterfully construct your custom assembly with genuine Swagelok componentry – and with as few connection points as possible for ultimate leak-tight output. Plus, our fabrication work is 100% warranted by Swagelok Company...and delivered as one part number for repeatable ease and accuracy! In all, you'll realize substantial reductions in engineering, scrap, rework, inventory, and administrative costs.
