

CUSTOMIZED Solutions for **YOUR** Time, Money, and Risk Challenges

Let Swagelok Pittsburgh | Tri-State Area lend a hand when you lack sufficient skills and resources to get more out the door safer, faster, and economically – to meet your customer demands.

Our **Design & Build Services** deliver exceptional, Swagelok-certified-and-warrantied panels, enclosures, and sub-assemblies – all expertly constructed by our master technicians to your exact specifications...and fully inspected and tested before departing our leading-edge, climate-controlled shop. All include genuine Swagelok componentry or Swagelok-approved third-party products for a repeatable, reliable, leak-tight performance in even the toughest applications and operating conditions. And, if you need wiring, automation, transmitters, relays, pumps, and other parts added, absolutely no problem! Not to mention, our assemblies are clearly marked and carefully packaged so that installation is simple and fast.

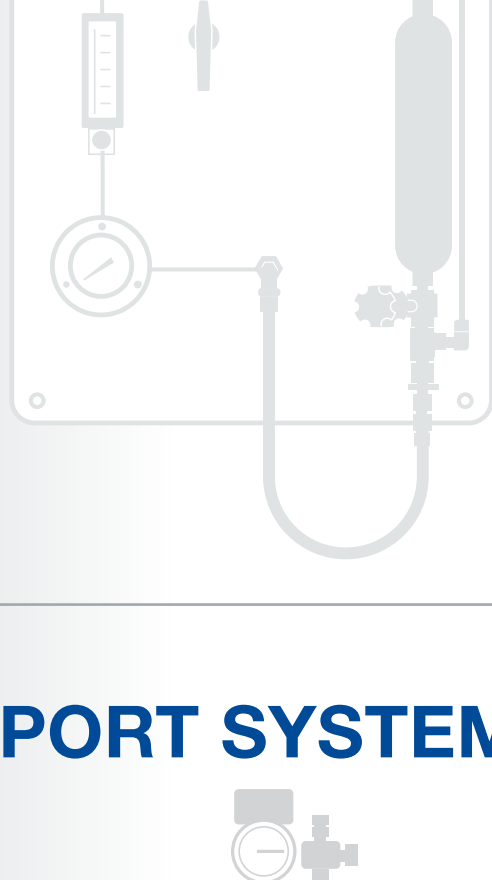

PLUS, we offer multiple standard and configurable designs for numerous specialized applications, including:

- ◆ **Grab Sampling Systems**
- ◆ **Mechanical Seal Support Systems**
- ◆ **Gas Distribution Systems**

GRAB SAMPLING SYSTEMS

We offer an array of system configurations to meet the unique needs of your application. Our closed-loop solutions deliver pressurized samples into pressure-rated cylinders; our liquid systems enable you to collect process fluid into glass lab bottles for analysis.

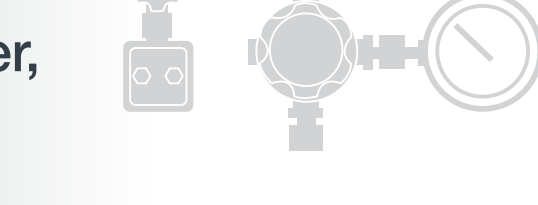

MECHANICAL SEAL SUPPORT SYSTEMS

Our kits and assemblies are available in a variety of API plan configurations – each built to exacting API 682 standards with greatly minimized connections and pipe threads to avoid dangerous/costly leakage.

GAS DISTRIBUTION SYSTEMS

Get gases from a high-pressure source to where they need to go at your application's specified flow and pressure rate. Ask about our four panel types: Swagelok Source Inlet, Swagelok Gas, Swagelok Changeover, and Swagelok Point-of-Use.

If you need design support at any level – whether you have any existing or preliminary drawing or just an idea, our Swagelok Field Engineer will assist you with ideal Swagelok product selection and sourcing, CAD drawings, P&ID help, Bills of Materials, large-scale tube bending or orbital welding, and so much more. Collaboration with you is essential – as we first try to learn, face-to-face, all aspects of your problem before we recommend an answer for improved productivity and efficiency.

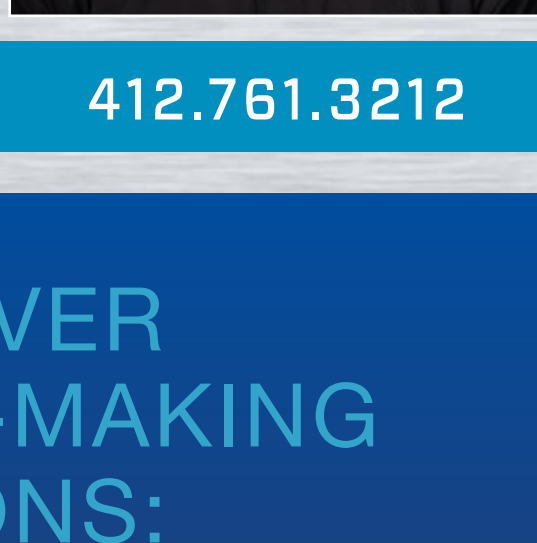

OUR PROMISE:

Keeping you safe, with greatly reduced engineering/scrap/rework/inventory costs.

And that means a healthier Bottom Line – and less overall day-to-day worry!
