

# SWAGELOK SAFE SAMPLING SOLUTIONS

**MAXIMIZING**Worker and  
Site Safety**MINIMIZING**Fugitive  
Emissions**MASTERING**Sample Integrity  
and Accuracy**Swagelok Grab Sampling Systems**

enable ultra-safe, highly efficient/effective capture of liquid or gas samples from a pipeline, tank, or system process for transportation to a laboratory for analysis.

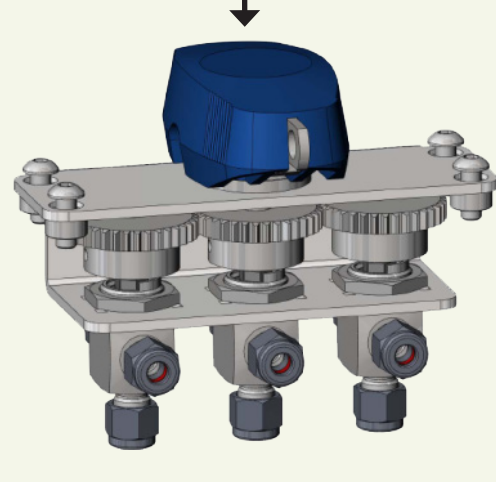

Chemical composition is pristinely maintained.

**Standard Liquid Sampler without Purge**

- Employs a pressure-containing metal cylinder
- Provides a sample that's fresh and extracted and held under the same process conditions that existed at the sample time (except temperature)
- Sampling vessel is docked in place, process fluid circulates continuously through it
- No waiting for lines to flush or bottles to fill

**Swagelok's unique Gearing Valve Assembly...**

- ...means **safe and simple operation**: just one valve handle to actuate to perform a full sampling cycle
- ...features an **error-proof design** that simultaneously actuates your 2-way or 3-way valves to prevent accidental emissions or unwanted purge gas into your process
- ...incorporates Swagelok 40-Series, third-party certified **Low-E valves**

**Standard Liquid Tank Sampler**

- Employs a cost-effective, non-pressure-containing glass or polyethylene bottle with a self-sealing septum cap
- Eliminates the risk of spillage or evaporation during sample draw and transport
- Inspector gets immediate visual feedback around sample stream quality
- A switching valve facilitates flow direction
