INDUSTRIAL HOSES

perform better, last longer, and, ultimately, cost less.

Part 2 of 2

Not only can your **local certified Swagelok Pittsburgh | Tri-State Area Hose Pros** help you safely and optimally apply and route hoses on your large compressor skids and other rotating equipment to greatly reduce the effects of vibration, but they can also assist with your selection of the **ideal long-life Swagelok® Hose cores and end connections for your specific Shale applications**: Well Heads, Compression, Custody Transfer, Processing, Cryogenic Service, and many more!

Our **all-metal Hoses** are rated to -325° F and deliver ultra-reliable performance in your cryogenic, ethane, and low-temperature applications. Offered in ¼ to 2" sizes, these workhorses are extremely flexible with a bend radius range of 1" to 5".

**Plus,**

we offer comprehensive **Swagelok Hose Advisories** that include an audit of your current Hose usage, sizing, maintenance, and storage practices. We then issue you a fully detailed report that not only identifies your likely problem areas, but also provides proven in-depth guidance on how to improve overall site/project safety, efficiency, and productivity.

In addition, we can conduct a half-day **Swagelok Hose Safety Essentials** class, your location or at our Pittsburgh Training Center, to teach your technicians critical Hose terminology, key installation skills, selection variables, routine inspection criteria...

WHO do I contact for more Swagelok Hose information or to sign up for a Swagelok Hose Advisory and/or Swagelok Hose Essentials class?

Zach Barefoot

Midstream & Construction Specialist

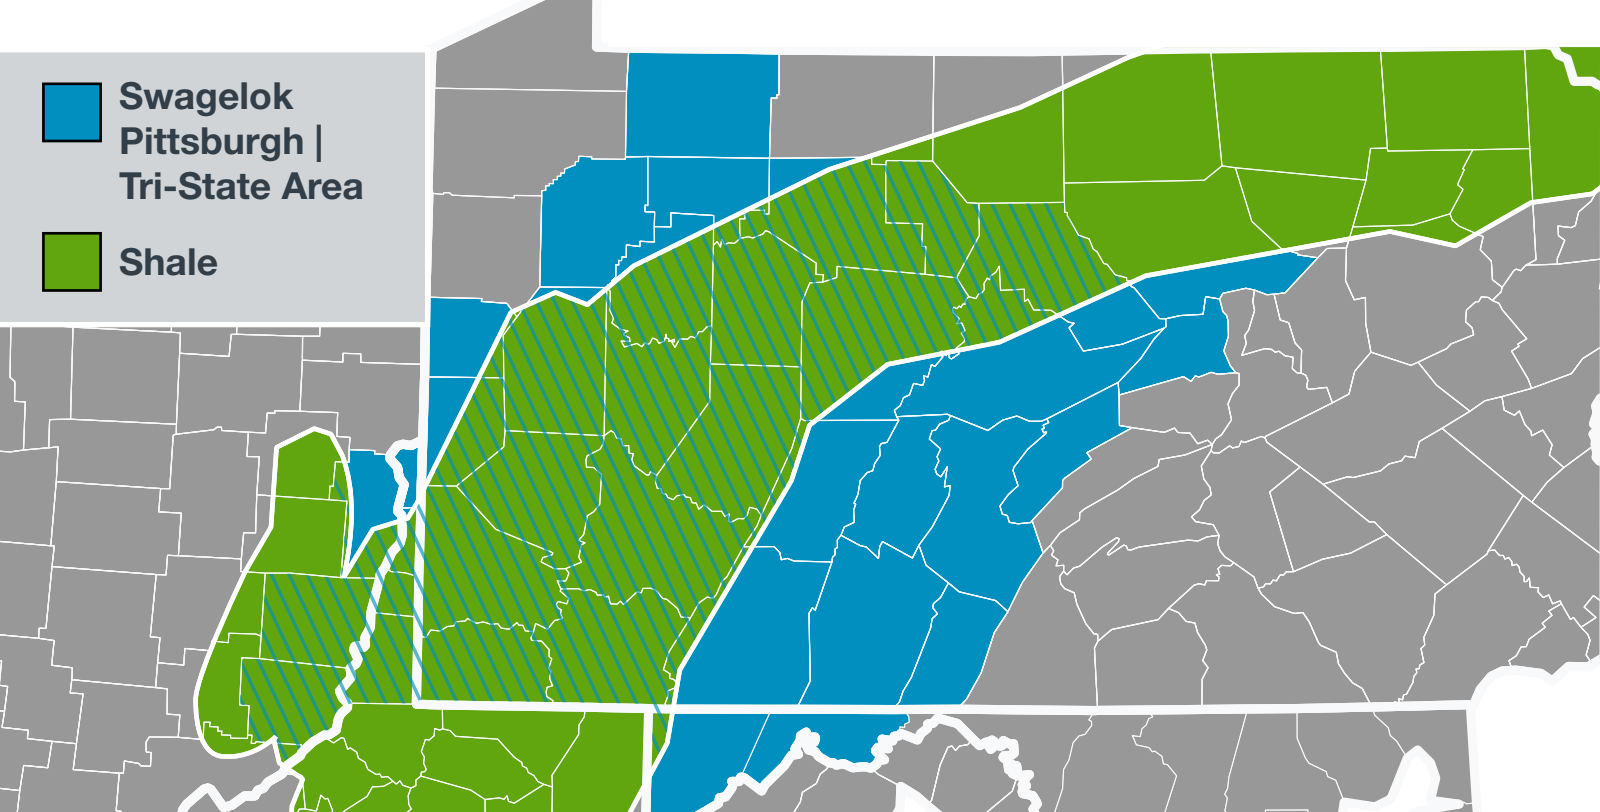

so that we can learn your key system criteria (pressure, temperature, phase, media, materials of construction, surface treatment, purge, and more) that will help us recommend the ideal Swagelok panel for you.
