Your Local Swagelok® Fluid-System Solutions Experts

What “They’re” Saying

No matter what your application or operational challenge, Swagelok premier Products and unparalleled Strategic Support Services deliver optimum safety, performance, and profitability.

Your Challenge

A large Oil and Gas customer faced a major and urgent issue: A stainless steel 316 fitting had been intermixed with a 2507 material tube during a turnaround – and significant site worker injuries resulted. A company-conducted investigation showed that maintenance personnel had been inadequately trained on fluid-system installation...AND that the similarity of the high-pressure and low-pressure tube fittings used at the location caused confusion around safe/proper hardware swaps.

Your Solution

Swagelok FK Series Tube Fittings were immediately put into service to replace all existing high-pressure and intermixed styles. In addition, we provided expert and hands-on technical and installation support, including day-long Safety Essentials training to ensure that all relevant workers fully understood how to safely and correctly pull up a tube fitting. Swagelok Field Engineers were also highly involved to guide our customer through the component-selection and instructional processes.

Your Healthier Bottom Line

Our customer, due to our training and overall assistance, ultimately improved the safety and reliability of its products because it could create and enforce different design requirements for all tube fittings (low-pressure and high-pressure) across existing and new construction projects.
