Market expertise

General industry, hydrogen, hydropower

Services

- Examine P&IDs and translate them into possible Swagelok solutions
- Design 3D models and 2D drawings of systems
- Collaborate with customers to design systems adapted to their specific needs
- Assess project feasibility and estimate costs

Training topics

Installation of fittings & best practices, direct sampling, hydrogen, pipes, regulators

Experience

I started at Swagelok Québec in customer service, then quickly moved into a sales representative role. My interest and expertise led me to **custom solutions as a project manager**, enriching my technical knowledge.

Overseeing customer service and shipping for three years, I gained an in-depth understanding of how a Swagelok sales and service center operates.

In 2019, I joined **Swagelok's Field Engineer program**, enabling me to develop global links and broaden my skills on a variety of analytical products and applications.

Product knowledge

Customized Solutions, Small Diameter Fittings, Direct Sampling Panel, Piping Products

Interpersonal skills: communication skills, leadership, listening skills, curiosity, team spirit, analytical skills, adaptability.
