

Local Swagelok® Support Line Card

Having components you trust is essential to operating safe and reliable fluid systems. Having local support you trust is crucial, too. Learn how our local fluid system specialists can support you.

Equipment Assembly

We fabricate custom fluid assemblies in our Camarillo facility. With certified technicians and a large local inventory, we provide safe, reliable, economical solutions. Design, testing, and warranty included.

Gas Panel, Cart, and Skid Assembly

Pre-engineered subsystems that are fully customizable to help you transfer and control fluid in your operations. Easy to install, operate & maintain. [More](#)

Hose Assemblies

Combine any of over 20 types of hose with dozens of end connection options (each pressure tested). Order exact copies on-demand. [More](#)

Gas Distribution Systems

Standardized designs have fewer potential leak points and are intuitively labeled for safety, simple to use, and easy to maintain. [More](#)

Precision Orbital Welding

Our ASME Section IX certified orbital welders can deliver precise welds with documented quality and consistent results. [More](#)

Grab Sampling Systems

Choose from 15 standardized, highly configurable designs for safe, efficient sample capture. Each is available with a variety of advanced features. [More](#)

Seal Support Assemblies

Get equipment that delivers gas or liquid to a seal's operating environment, boosting performance and longevity. All designs meet API 682 standards. [More](#)

Field Engineering

Put Swagelok Southern California's Field Engineering team alongside yours. Together we will improve fluid systems at your facilities for better performance at a lower cost with maximum output.

Compressed Gas Leak Detection

Find leaks, estimate loss, and address causes. Get detailed recommendations on how to prioritize, fix, and save. [More](#)

Hose Advisory

Find out how to enhance your hose selection, installation, inspection, and maintenance. We help you extend hose life, minimize repairs, and save. [More](#)

Fluid System Evaluation

Have our field engineers assess and advise how to get better performance, lower energy consumption, and more. We help you prioritize and save. [More](#)

Sampling Systems Evaluation

Improve sampling accuracy and reliability with in-depth analysis and consulting on every component and subsystem, from process tap to analyzer. [More](#)

P&ID Optimization and CAD Drawings

Project plan with our field engineers to optimize your system design and create the CAD drawings you need using SolidWorks. [More](#)

Operations and Maintenance Assessment

Swagelok field engineers enable your standardized operating procedure and maintenance plan for long-term cost savings and safety. [More](#)

In-House Services

Local services designed for time savings, efficiency, and cost-effectiveness include CNC and hand/electric tube benders for precise, repeatable tube bends to your specifications, as well as access to an in-house ultrasonic cleaning cell and high pressure testing system. All backed by **Swagelok's Limited Lifetime Warranty**. Ask us for [more details](#).

Application Support | Team Training

Our local team includes engineers, technical support gurus, assembly technicians, procurement experts, and quality assurance. We strive to integrate all our capabilities to delivery total solutions to you.

Training Your Team

Minimize leaks and rework to lower operating costs and improve efficiency. Earn Swagelok Certificates of Completion. Choose from options listed below or design a custom training program for your team. [View training info here.](#)

Tube Fitting Installation Essentials

Hands-on course teaches techniques for proper fitting selection and installation for anyone who designs, installs, inspects, or maintains tubing systems.

Med Pressure Fittings, FK/Cone & Thread Essentials

Learn about safe, optimal performance of FK fittings and related medium/high pressure systems to establish installation and maintenance techniques.

Tube Bending Essentials and Advanced Training

Learn to efficiently bend tubing and reduce work time using common methods. Tools include hand benders and benchtop benders.

Orbital Welding Training

4.5 days intensive classroom and hands-on training with optional ASME IX certification for welders, orbital welding supervisors, engineers, and quality control professionals.

Technical Support

Your assigned technical account manager can assess your BOM for parts that work better, are available sooner, or can save cost by comparison. Use our CAD files, sales drawings, and other [tools on our website.](#)

Third Party Sourcing for Assemblies

To help you save time, we offer product selection and ordering assistance on bill of materials (BOM) specified items not offered by Swagelok.

Delivery and Supply Chain Support

Use Just in Time Delivery or take advantage of quantity discounts and protect availability by staggered scheduled ship quantities and dates.

Packaging & Kitting

From cleanroom packaging and custom kitting to answering questions during installation, our local team is ready to help your team simplify and save.

Tool & Equipment Rentals

Rent items for fluid system fabrication, assembly, installation, maintenance, and repair. Rent coning tools, orbital welding systems, swaging tools, etc.

Vendor Managed Inventory (VMI)

Put our team alongside yours to lower inventory costs. We can help reduce stock levels and transactions, plus enhance supply chain visibility.

Cleanroom

High-purity welding and assembly is available in our Class 100 (ISO 5) cleanroom to ensure compliance of proper regulatory standards where required.
