Female Swagelok tube fittings are installed in three easy steps:

### Step 1

Insert the tubing into the female Swagelok tube fitting. Make sure the tubing rests firmly on the shoulder of the fitting and that the Swagelok male nut is finger-tight.

#### Step 2 Scribe the nut at the 6 o'clock position.

## Step 3

While holding the valve body steady, tighten the Swagelok nut one and one-quarter turns. Using the scribe mark, make one complete revolution and continue to the 9 o'clock position. For 1/16, 1/8, and 3/16 in., and 2, 3, and 4 mm size tube fittings, tighten three-quarters turn to the 3 o'clock position.

Use the appropriate Swagelok gap inspection gauge to check for sufficient pull-up.

# Installation Instructions for Female Swagelok® Tube Fittings

Female Swagelok tube fittings have a deeper tube bore than standard Swagelok tube fittings. Because of the deeper tube bore, the following cannot be used in a female Swagelok tube fitting:

- 1. Tube fitting reducers.
- 2. Tube adapters.
- Tube ends that have been pre-swaged with a pre-swaging tool.
- 4. Tube ends that have been previously swaged into a Swagelok tube fitting.

WARNING: Do not mix/interchange Swagelok products or components not governed by industrial design standards, including Swagelok tube fitting end connections, with those of other manufacturers.

Pressure ratings for valves with Swagelok tube fitting ends may be lower. See *Tubing Data*, MS-01-107, for more information.
