Swagelok® IPT Series
NVT Needle Valve

- Stainless steel handle for superior corrosion resistance. (standard on all valves)
- Excess material removed from handle for reduced weight
- Internal gland locking device prevents accidental loosening or disassembling of the packing gland. Also allows for simple panel mounting.
- Bi-directional flow capability. Prevents damage to valve in case of accidental reverse hook up.
- Full open in 4-5 vs 9 turns
- Stainless steel captive fixing screw with stainless spring. Prevents misplaced or dropped fixing screws during installation.
- Handle secured to top of 4-sided tapered stem to prevent slippage.
- Packing gland machined from NiAlBronze for reduced operating torque.
- Two-piece, non-rotating stem. Simplified and more reliable design compared to styles that require stem sleeve adjustment by means of locknuts.
- Vee or regulating stem tips available for a wider range of control.
